

JERN w8000

The new on wall cast iron loudspeaker from 

“Cast Iron could well be the ultimate material for
loudspeaker enclosures”....

The quote is from the review of the JERN14 DS. See it on www.jernspeakers.com

The loudspeaker is easily placed everywhere and blend in very well in all surroundings.

We have 40 years of experience in making high quality castings in metal for Audi, BMW, LAND ROVER, McLaren, Porsche, Rolls Royce, Volvo, ABB, Siemens og JERN Speakers.

Maybe you already use on of our products today. See www.skalfom.dk

Cast iron has much better sound vibration damping than aluminium and MDF wood. Therefore our cabinets vibrates less and are very silent.

In a normal room the new w8000 plays down to 40 Hz, so it sounds good without a subwoofer.

The w8000 is 4 Ohm and 87 dB/2,83V.

The w8000 is 32 cm in diameter and 10 cm deep . The weight is only 9 kg, although it is made of cast iron.

Loudspeaker fabric covering the whole loudspeaker is available in white or black with a rubber band, for easy changing. Only cover on the optional woofer gives a rough casting look.

The organic rounded shape cabinet reduces diffraction from edges, and looks good. See www.jernspeakers.com or see more on Facebook. Look for Jernspeakers.
